## Cyber Defence Services

Our expertise, your security

Intrusions into an organisation's network to steal data or disrupt the Information Systems, are increasingly prevalent; these cyber-attacks are often sophisticated and stealthy, which makes it more difficult to detect them. To address these attacks organisations need solutions that are comprehensive and flexible to address their specific issues.

Airbus Defence and Space offer this global cyber defence solution today which dynamically associates monitoring, attack detection and investigation, through to incident response.

Thanks to the combination of our tools, expertise and field experience, we can ensure our customers a significant time to detection saving and even early detection of weak signals. This makes it possible to contain development of an attack before it is too late.

To support this approach Airbus Defence and Space has established Cyber Defence Centres (CDC) which protect and monitor your assets in real time, 24/7/365.

Benefits:

Our CDC combines suspicious activity detection tools with rapid investigation capabilities.

→ **Significant time reduction between an attack and its treatment.**

Our hypervisor tool provides you with a technical and operational overview of your network's security status, enabling you to take quick decisions, adapted to your specific situation.

→ **A synthetic overview allowing you to take the right operational decisions.**

Our threat intelligence database, permanently capitalises on all the components of a cyber-attack (malware, knowledge of the attackers, signature base).

→ **Constant improvement of your security status.**

**AIRBUS**

## Our cyber defence offer is composed of three ranges of services:

 <b>Threat Assessment</b>	
<b>Our offer</b>	<ul style="list-style-type: none"> <li>• Strategy consulting for the deployment of cyber defence capacity</li> <li>• Optimisation of your security tools and processes</li> <li>• Evaluation of your information system' security status</li> <li>• Technical audits identifying your network's weak points and implementation of corrective measures</li> <li>• Definition of your security policy in accordance with national legal constraints and your operational constraints</li> </ul>
<b>Associated services and solutions</b>	<ul style="list-style-type: none"> <li>• Cyber defence on-demand</li> <li>• APT Check</li> <li>• Active Directory security insight</li> <li>• Penetration tests</li> </ul>

 <b>Advanced Security Monitoring</b>	
<b>Our offer</b>	<ul style="list-style-type: none"> <li>• Real-time detection, alert and recommendations in case of an incident</li> <li>• Complete analysis of the situation thanks to our threat intelligence database</li> <li>• Malware and sophisticated attack detection and investigation</li> </ul>
<b>Associated services and solutions</b>	<ul style="list-style-type: none"> <li>• SIEM protective monitoring</li> <li>• Intrusion monitoring</li> <li>• Malware monitoring</li> <li>• APT monitoring</li> <li>• Vulnerability and compliance monitoring</li> </ul>

 <b>Advanced Incident Response</b>	
<b>Our offer</b>	<ul style="list-style-type: none"> <li>• Support throughout the whole crisis, from the detection to the system's remediation</li> <li>• Exhaustive analysis of the situation thanks to our threat intelligence database</li> <li>• Static, dynamic and behavioral malware analysis</li> <li>• Large scale forensic investigation of the affected network</li> </ul>
<b>Associated services and solutions</b>	<ul style="list-style-type: none"> <li>• Cyber defence on-demand</li> <li>• Advanced forensics</li> <li>• Cyber incident response</li> <li>• Malware analysis</li> </ul>
