

CYBERSECURITY

OT-Security Risk Assessment

Comprehensive risk assessments of industrial systems based on the probability of threats occurring

Damage from industrial cyber attacks continues to increase. In addition to financial damage and competitive disadvantages, cyber attacks on critical infrastructure also have the potential to affect the general public.

ICS are increasingly interconnected to capitalise on the opportunities and benefits of digitalisation. However, the networking of ICS through the Internet also means that the equipment is exposed to new cyber threats and the risk of cyber attacks and potential business interruptions increases as a result.

We at Airbus CyberSecurity offer risk analysis services for your ICS.

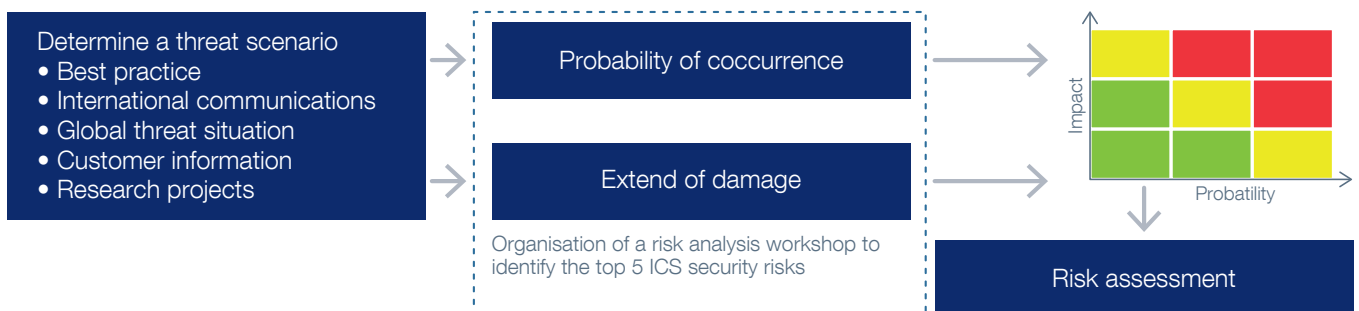

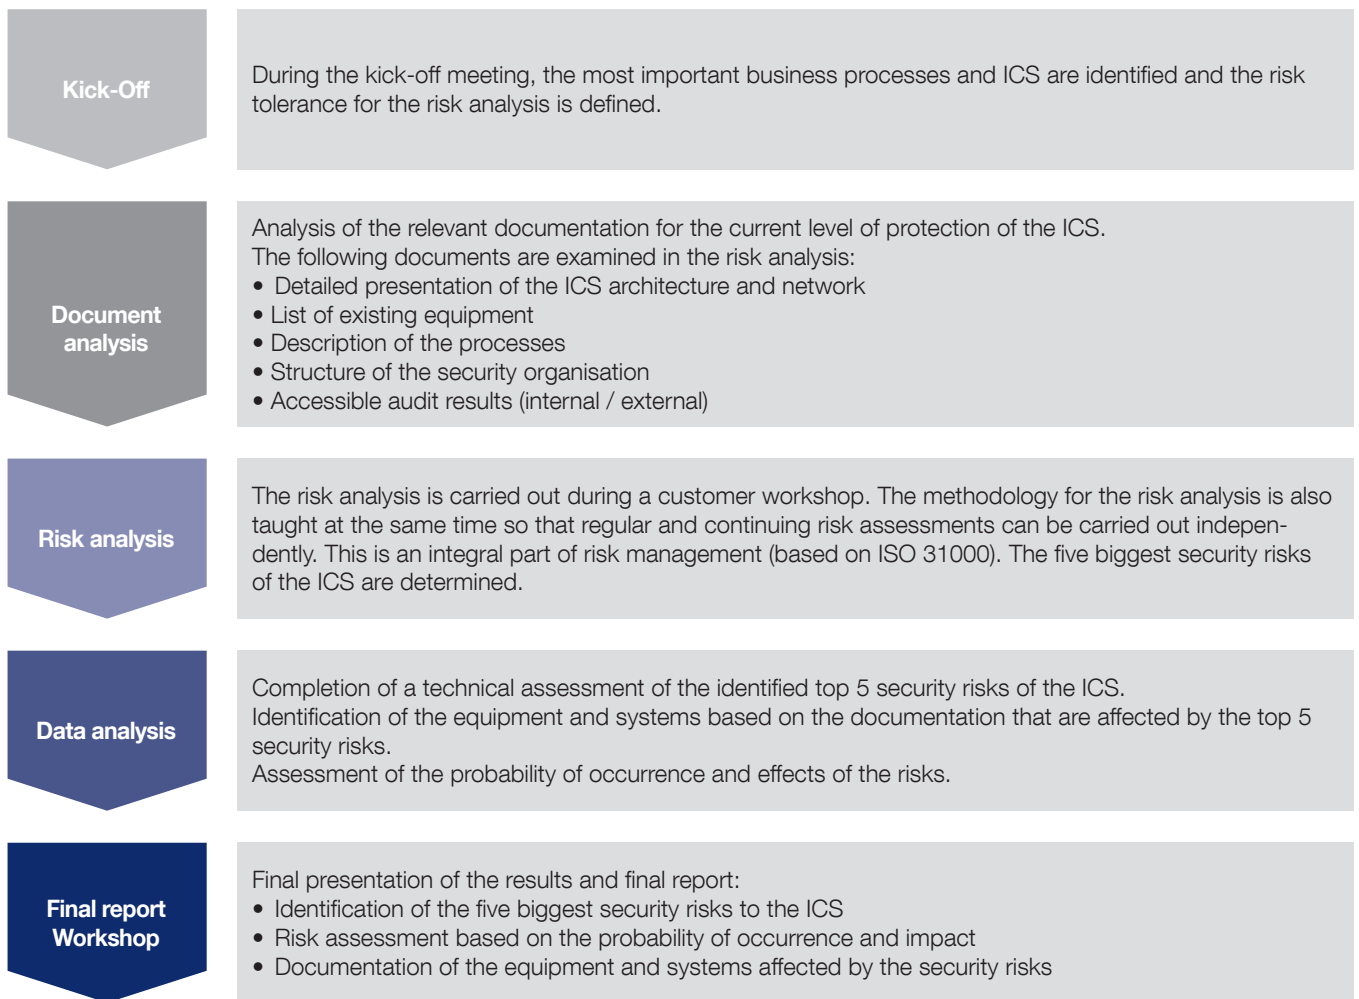

The security risks in production facilities as well as in critical infrastructure are evaluated and, if necessary, recommendations to minimise technical risks are provided. The methods used produce a qualitative risk analysis of the severity of the potential impacts (low, medium, high) as well as their probability of occurrence.

Features:

- Identification of the five biggest security risks (top 5) to your ICS
- Identification of equipment and systems which are affected by the top 5 risks
- Uses proven methodology for effective risk analysis

AIRBUS

OT-Security Risk Assessment

Added value for you:

- Comprehensive risk assessment with analysis of the impact on production and business operations
- Suggestions for risk reduction / treatment based on prioritisation of the identified risks
- Creation of a basis for decision-making based on the implementation of measures
